---

Frontend engineer and SDET with 3.5+ years at Yahoo Sports across web and mobile platforms. Shipped React features, modernized end-to-end test infrastructure, and integrated CI/CD pipelines that reduced production regressions. Experienced across the full development lifecycle from feature delivery to release quality.

WORK EXPERIENCE

Yahoo Sports | Los Angeles, CA & Remote
Software Test Engineer Mar 2024 – Mar 2026
Led QA modernization and testing efforts across web and mobile platforms.

- Led migration of 50+ end-to-end tests from deprecated Protractor to WebdriverIO in a Next.js stack, cutting execution time 30% and significantly improving test stability.
- Integrated automated end-to-end regression and smoke suites into Screwdriver CI/CD pipelines as pull request and pre-release checks, reducing production regressions ~20%.
- Triaged 300+ defects, including high-severity production bugs, debugging with browser DevTools, network logs, and source code to pinpoint root causes and speed up developer fixes.
- Accelerated end-to-end test authoring in WebdriverIO with AI-assisted test generation (GitHub Copilot), reviewing and refining generated tests to expand coverage across Yahoo Sports web and mobile.
- Wrote test plans and test cases for Yahoo Sports releases, running cross-browser and cross-device testing across Chrome, Safari, Firefox, iOS, and Android to catch platform-specific defects before launch.

Software Engineer May 2022 – Nov 2023
Built and maintained frontend features for Yahoo Sports product surfaces.

- Built and unit tested 20+ reusable, accessible React components serving millions of monthly Yahoo Sports users across boxscores, standings, and live data visualizations.
- Integrated GraphQL and REST APIs into the frontend to power live game data on high-traffic Yahoo Sports pages, optimizing data fetching and client-side caching for faster page loads.
- Shipped 80+ frontend features and fixes across 2-week Agile sprints, partnering with product managers, designers, and backend engineers from spec through code review and release.
- Refactored legacy JavaScript modules into modern, modular code with Jest coverage, cutting technical debt and regression risk.
- Implemented accessibility improvements (ARIA labels, keyboard navigation) and responsive layouts across desktop, tablet, and mobile web to meet WCAG guidelines.

AppFolio, Inc | Santa Barbara, CA
Technical Support Engineer Aug 2020 – Sep 2021
Delivered technical support and defect triage across AppFolio's property management platform.

- Performed root cause analysis on 100+ escalated production defects, assigning severity and priority in Salesforce and partnering with engineers to verify fixes before release.
- Resolved 1,500+ technical cases at ~95% CSAT, using exploratory testing on complex accounting and leasing workflows to separate product defects from configuration and user error.

SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Testing & Automation: WebdriverIO, Playwright, Detox, Jest, Vitest, pytest, Postman, k6, SauceLabs, Page Object Model
Testing Practices: End-to-end, API, performance, regression, exploratory, cross-browser & accessibility testing; test planning
Frontend: React, React Native, Next.js, Redux, HTML5, CSS3, SCSS
Backend & Databases: Node.js, Express.js, Ruby on Rails, GraphQL, REST, PostgreSQL, MySQL, MongoDB, Firebase
DevOps & Tools: AWS, Git, Screwdriver CI/CD, Jira, Chrome DevTools, Agile/Scrum
AI Tools: GitHub Copilot, Claude Code, AI-assisted testing

EDUCATION & TRAINING

App Academy · Full Stack Web Development · 2021
University of California, Santa Barbara · B.A. Geography, GIS Emphasis · Minor: Art & Technology · 2020
